

RIGHT ANGLE CONSTRUCTION

ENVIRONMENTAL POLICY

Right Angle Construction was founded on the idea that as business owners, we have a responsibility to our employees, customers, and the wider community, to ensure we work to protect our shared environment.

To support this goal, we will:

- Comply with applicable local and national environmental regulations
- Continually improve the environmental performance of our products and processes
- Protect the health and safety of our employees and the surrounding human communities and ecosystems
- Use natural resources, including raw materials, energy, and water, as efficiently as possible.

We will work to achieve these commitments by:

- Assessing environmental awareness of all our employees and providing environmental training where appropriate.
- Evaluating waste management, and working to eliminate or minimise waste, or finding environmentally sound ways to deal with waste produced.
- Evaluating products and processes from the point of view of chemical risk, dedicating ourselves to finding better alternatives based on preventing pollution in the first place.
- Considering the risks of our raw materials and products at all stages of our product's life, placing priority on risks present during our production process and during our customers' use of our products
- Working collaboratively with our customers, suppliers and the surrounding community on environmental issues.

We will make every effort to ensure that environmental performance is an integral part of Right Angle's performance and of the performance of all of our employees. To this end, we will measure and periodically report on our progress in realising these commitments.

Signed

Taf Barrie (Director)
